SYLLABUS

B.Sc. (Computer Science, Statistics, Mathematics) Part – I

Outlines of Text Syllabi and Courses of Reading.

Note:-Every theory paper will be of three hours duration.

For Examination of Session 2022-23

1st Semester

Code	Core/ Elective	Title of paper /subject	Hrs./ Week	Max. Marks		Total	Total Credits
				Cont. Asmt.	Uni. Exam.		
STAB1101T	Core	Algebra	4	30	45	75	4
STAB1102T	Core	Trigonometry and Differential Calculus	4	30	45	75	4
STAB1103T	Core	Computer Oriented Statistical Methods-I	3	20	30	50	3
STAB1104T	Core	Probability Theory-I	3	20	30	50	3
STAB1105P	Core	Statistical Practicals-I	4	-	50	50	2
STAB1106T	Elective	Introduction to Information Technology	3	20	30	50	3
STAB1107T	Elective	Object Oriented Programming Using C++	3	20	30	50	3
STAB1108P	Elective	Computer Practicals- I	4	-	50	50	2
			Total	140	310	450	24

Note: 1. The minimum pass marks in each paper is 35% in Continuous Assessment and University Examination separately subject to a minimum of 40% in aggregate.

2. In addition to above mentioned subjects, there will be a course of Qualifying Punjabi Compulsory/Elementary Punjabi as a qualifying subject.

Programme Officer

**BREAK-UP OF MARKS FOR CONTINUOUS ASSESSMENT
OF THEORY PAPERS**

- | | | |
|----|--|--|
| 1. | Two house/midterm tests will be held and their average will be considered for assessment | 50% Marks |
| 2. | Seminars/Assignments/Quizes/
Class participation | 25% Marks |
| 3. | Attendance | 25% Marks |
| | Marks will be given according to below criteria: | |
| | 75% attendance & above
but less than 80% | 60% Marks of allotted marks to attendance |
| | 80% attendance & above
but less than 85% | 80% Marks of allotted marks to attendance |
| | 85% attendance & above | 100% Marks of allotted marks to attendance |
| | Seminars/Assignments/Quizes | 25% Marks |

Handwritten signatures and initials in blue ink, including 'mpasane' and a circled signature.

Handwritten signatures and initials in blue ink, including 'Ah' and a signature with a horizontal line.

STAB1101T : ALGEBRA

No. of Lectures : 55 to be delivered	Max. Marks :	Uni. Examination - 45	} 75
		Int. Assessment - 30	
Time Allowed : 3 Hours	Min. Pass Marks	Uni. Examination - -35%	% Aggregate
		Int. Assessment - -35%	

INSTRUCTIONS FOR THE PAPER SETTER

The question paper will consist of three sections A, B and C. Each of sections A and B will have four questions from the respective sections of the syllabus and section C will consist of one compulsory question having seven parts of short-answer type covering the entire syllabus uniformly. All questions of sections A and B will carry 6 marks each where as section C will carry 21 marks

INSTRUCTIONS FOR THE CANDIDATES

Candidates are required to attempt five questions in all, selecting two questions from each section A and B and the compulsory question of section C. All questions of sections A and B will carry 6 marks each where as section C will carry 21 marks.

Use of scientific non-programmable calculator is allowed

SECTION-A

Relations between the roots and coefficients of general polynomial equation in one variable .Transformation of equations. Descarte's rule of signs: Solution of cubic equations (Cardon method). Biquadratic equations. Mappings, Equivalence relations and partitions .Congruence modulo n. Symmetric, Skew symmetric, Hermitian and Skew Hermitian matrices . Elementary operations on matrices. Inverse of a matrix .

SECTION-B

Linear independence of row and column vectors. Row rank ,column rank and rank of a matrix . Equivalence of column and row ranks. Eigen values, eigen vectors and the characteristic equation of a matrix. Cayley Hamilton theorem and its use in finding inverse of a matrix. Applications of matrices to a system of linear (both homogeneous and non-homogeneous) equations. Theorems on consistency of a system of linear equations .

SECTION-A

Trigonometry: De Moivre's theorem and its applications . Direct and inverse circular and hyperbolic functions. Logarithm of a complex quantity. Expansion of trigonometrical functions. Gregory's series. Summation of series.

SECTION-B

Differential Calculus: ϵ - δ definition of the limit of a function . Basic properties of limits . Continuous functions and classification of discontinuities . Differentiability . Successive differentiation . Leibnitz theorem . Asymptotes . Curvature. Tests for concavity and convexity. Points of inflexion . Multiple points. Tracing of curves (Cartesian and parametric coordinates only).

SECTION- A

Types of data; Quantitative & Qualitative, Discrete & Continuous, Collection of Primary Data; through designing Questionnaire & Schedule. Secondary Data; Major Sources including some Government Publications. Concept of Population & Sample, Scales of Measurements. Construction of tables with one or more factors of classification, Frequency distributions; Cumulative frequency distributions, Diagrammatic and graphical representation of grouped data; Histogram, Frequency Polygon and Ogives, Stem and leaf chart, Box plot.

SECTION-B

Analysis of Quantitative Data: Concept of Central Tendency; its measures. Concept of Dispersion; Absolute and Relative measures of Dispersion. Statistical Moments; Raw, Central and factorial, Inter-relations of moments, Sheppard's Correction for Moments (without derivation). Concepts of Skewness & Kurtosis and their Measures including those based on Quartiles and Moments.

Use of scientific non-programmable calculator is allowed

SECTION- A

Important Concepts in Probability :Random Experiment, Trial, Sample Point and Sample Space, Definition of an Event, Mutually Exclusive, Exhaustive, Independent and Equally Likely Events. Definition of the Probability-Classical and Relative Frequency approach to Probability, their Demerits and Axiomatic Approach to Probability. Properties of Probability Based on Axiomatic Approach, Conditional Probability, Bayes Theorem and Its Applications.

SECTION- B

Random Variable : Definition of Discrete Random Variables, Probability Mass Function ,Continuous Random Variable, Probability Density Function Illustrations of Random Variables and Its Properties, Expectation of a Random Variable and its properties-Moments, Measures of Location and Dispersion, Moment Generating Function and Probability Generating Function. Two Dimensional Random Variables Joint, Marginal and Conditional Distributions (Concepts & Simple Applications) .

Total Practical Sessions: 25
(each of two hours)
Time Allowed : 3 Hours

Max. Marks : 50

Min. Pass : 40%
Marks

INSTRUCTION FOR THE PAPER SETTER AND THE CANDIDATES

The setting and evaluation will be done by a board of examiners consisting of Head, External examiner and the teacher(s) involved with the teaching of this paper.

The practical paper will consist of four exercises and the candidates will be required to attempt any three exercises.

The break-up of marks for the University Examination will be as under:

Lab. Record	:	10
Viva-voce	:	10
Exercises	:	30

Time Allowed : 3 Hours

Lab Course:

The exercises will be based on the syllabus of the papers STAB1103T(Computer Oriented Statistical Methods-I) and STAB1104T(Probability Theory-I).

attempt any three exercises.

Four handwritten signatures in blue ink are present at the bottom of the page. From left to right, they are: a signature that appears to be 'Jay', a signature that appears to be 'Narasimha', a signature that appears to be 'Raj', and a signature that appears to be 'Ramesh'.

SECTION-A

Computer: Definition, Characteristics of Computers, Basic Applications of Computer, Generations of computers.

Components of Computer System: Concepts of Hardware and Software, Central Processing Unit (CPU), input/output Devices, computer Memory: primary and secondary memory, magnetic and optical storage devices.

Number System: Bits, Bytes, Moore’s Law, Non-Positional and Positional number systems, fractional numbers, Computer code: BCD, EBCDIC, ASCII, UNICODE. Binary, Decimal, Hexadecimal and Octal System, Conversion from one System to another. Binary Arithmetic: Addition, Subtraction and Multiplication.

Introduction to Computer Language: Machine Language, Assembly Language, Higher Level Language, Assembler, Compiler, Interpreter.

SECTION B

WWW and Internet: Introduction, home page, connecting to web, browsing, information search, multimedia. Computer Network and communication: Network types, network topologies, network communication devices, physical communication media. Introduction of E-Commerce: Meaning, its advantages and Limitations, Type of E- Commerce Applications.

Word Processing-MS Word : Word Processing Basic: An Introduction to Word Processing and MS-Word, Working with documents, using tables, pictures, and charts, using mail merge and sending a letter to a group of people.

MS Excel: Spreadsheet basics, Creating, editing, saving and printing spreadsheets, Working with functions & formulas , Modifying worksheets with color & autoformats, Graphically representing data using Charts & Graphs , Analyzing data using Data Menu, Subtotal, Filtering Data, Formatting worksheets, Securing & Protecting spreadsheets.

SECTION A

Evolution of OOP: Procedure Oriented Programming, OOP Paradigm, Advantages and disadvantages of OOP over its predecessor paradigms.

Characteristics of Object Oriented Programming: Abstraction, Encapsulation, Data hiding, Inheritance, Polymorphism, Code Extensibility and Reusability, User defined Data Types.

Introduction to C++: Identifier, Keywords, Constants, Operators: Arithmetic, relational, logical, conditional and assignment. Sizeof operator, Operator precedence and associativity.

Type conversion, Variable declaration, expressions, statements, manipulators
Input and output statements, stream I/O, Conditional and Iterative statements, breaking control statements.

Storage Classes: Automatic, Static, Extern, Register. Arrays, Arrays as Character Strings, Structures, Unions, Bit fields, Enumerations and User defined types:

Pointers: Pointer Operations, Pointer Arithmetic, Pointers and Arrays, Pointer to functions. Functions: Prototyping, Definition and Call, Scope Rules. Parameter Passing: by value, by address and by reference, Functions returning references, Const functions, recursion, function overloading, Default Arguments, Const arguments.

SECTION B

Inheritance: Multiple, Multilevel, Hierarchical .

Classes and Objects: Class Declaration and Class Definition, Defining member functions, making functions inline, Nesting of member functions, Members access control. this pointer. Union as space saving classes.

Objects: Object as function arguments, array of objects, functions returning objects, Const member functions. Static data members and Static member functions.

Friend functions and Friend classes.

Constructors: properties, types of constructors (Default, parameterized and copy), Dynamic constructors, multiple constructors in classes. Destructors: Properties, Virtual destructors. Destroying objects. Rules for constructors and destructors.

Array of objects. Dynamic memory allocation using new and delete operators, Nested and container classes. Scopes: Local, Global, Namespace and Class

Inheritance: Defining derived classes, inheriting private members, single inheritance, types of derivation, function redefining; constructors in derived class.

SECTION-A

Integration of irrational algebraic and transcendental functions . Reduction formulae. Definite integrals . Quadrature and rectification . Volumes and surfaces of solids of revolution . Degree and order of a differential equation . Equation of first order and first degree. Equations in which the variables are separable . Homogeneous equations . Linear equations and equations reducible to the linear form . Exact differential equations .

SECTION-B

First order higher degree equations solvable for x, y, p. Clairaut's form and singular solutions . Geometrical meaning of a differential equation .Orthogonal trajectories .Linear differential equation with constant coefficients .Homogeneous linear ordinary differential equations. Linear differential equations of second order .Transformation of the equation by changing the dependent variable/ the independent variable. Method of variation of parameters .

INSTRUCTIONS FOR THE PAPER SETTER

The question paper will consist of three sections A, B and C. Each of sections A and B will have four questions from the respective sections of the syllabus and section C will consist of one compulsory question having seven parts of short-answer type covering the entire syllabus uniformly. All questions of sections A and B will carry 4 marks each where as section C will carry 14 marks

INSTRUCTIONS FOR THE CANDIDATES

Candidates are required to attempt five questions in all, selecting two questions from each section A and B and the compulsory question of section C. All questions of sections A and B will carry 4 marks each where as section C will carry 14 marks.

Use of scientific non-programmable calculator is allowed

SECTION- A

Standard univariate discrete distributions and properties : Discrete uniform, Binomial, Poisson, Hyper Geometric, Geometric and Negative Binomial distributions. Continuous univariate distributions: Uniform , Normal , Exponential, Gamma, Beta and Chi-square distributions.

SECTION-B

The bivariate normal distribution, the marginal and conditional probability distributions associated with the bivariate normal distribution (without derivation). Chebyshev's inequality and its applications, statements and applications of weak law of large numbers and central limit theorems (De-moivre's-Laplace and Lindeberg-Levy versions).

STAB1205P:STATISTICAL PRACTICALS-II

Total Practical Sessions: 25
(each of two hours)
Time Allowed : 3 Hours

Max. Marks : 50
Min. Pass : 40%
Marks

INSTRUCTION FOR THE PAPER SETTER AND THE CANDIDATES

The setting and evaluation will be done by a board of examiners consisting of Head, External examiner and the teacher(s) involved with the teaching of this paper.

The practical paper will consist of four exercises and the candidates will be required to attempt any three exercises.

The break-up of marks for the University Examination will be as under:

Lab. Record	:	10
Viva-voce	:	10
Exercises	:	30

Lab Course:

The exercises will be based on the syllabus of the papers STAB1203T(Computer Oriented Statistical Methods-II) and STAB1204T(Only Fitting of distributions).

Three handwritten signatures in blue ink are present. The first signature on the left is 'M. S. S.', the middle one is 'A. S.', and the right one is 'S. S.'. Below the first signature, there is a faint, partially legible text: 'attempts any three exercises'.

The exercises will be held in the following manner:

STAB1206T: DATA STRUCTURES

No. of Lectures : 40	Max. Marks :	Uni. Examination - 30	} 50
to be delivered		Int. Assessment - 20	
Time Allowed : 3 Hours	Min. Pass :	Uni. Examination - 35%	} 40% Aggregate
	Marks	Int. Assessment - 35%

SECTION A

Data structures and data structure operations, ADT Concept, algorithmic complexity and time space trade off.

Introduction to basic data structures such as arrays, linked-lists, stacks and queues, Linked and sequential representation, Basic operations such as insertion, deletion, searching.

Linked list, representation of linked list, doubly linked-list, circular linked list.

Implementation of stacks, postfix to infix conversion and evaluation of expressions using stacks, Queue, Dequeues and their applications.

SECTION B

Tree : definitions and basic concepts, linked tree representation, representations in contiguous storage, binary trees, binary search tree : traversal searching, insertion in BST, heap and heap sort algorithm.

Graphs and their application, sequential and linked representation of graph, operations on graph, traversing a graph, Dijkstra's algorithm for shortest distance, DFS and BFS.

Searching and sorting : linear and binary search, hash search, insertion, selection merge, radix, bubble, quick sort. Memory management: Allocation, garbage collection, fragmentation & compaction.

SECTION A

Framework of Management Information Systems: Importance's of MIS, Concepts of Management, information, system, Definition of MIS, information technology and MIS, nature and scope of MIS, MIS characteristics and functions.

Structure and classification of MIS: structure of MIS, MIS classification, Brief introduction of functional information system, financial information system, marketing information system, production/ Manufacturing information system, human resources information system.

Decision making and MIS: decision making, Simon's model of decision making, types of decisions, purpose of decision making, level of programmability, knowledge of outcomes, methods of choosing among alternatives, decision making and MIS.

Information and system concepts: types of information: strategic information, Tactical information, Operational information. Information quality, dimensions of information, System: Kinds of Systems, System related concepts, elements of systems, Human as an information processing system.

SECTION B

System development stages: System investigation, system analysis, system design, construction and testing, implementation, maintenance.

System development approaches (a brief introduction) : waterfall model, prototyping, iterative enhancement model, spiral model.

System analysis: introduction, requirement definition, , strategies for requirement definition, structured analysis tools: data flow diagram, data dictionary, decision trees , structured English, decision trees.

System Design: objectives, conceptual design, design methods, detailed system design.

Implementation and evaluation of MIS: implementation process, Hardware and software selection, Evaluation MIS, System maintenance.

Information system Planning: Information system Planning, planning terminology, the Nolan stage model, selecting a methodology, information resources management.

Information system (IS) as an Enabler: introduction, changing concepts of IS , IS as an enabler
